Dear Sir or Madam:

It has come to my attention that the FCC is considering giving LPFM station priority over existing FM stations in the lower frequency bandwidth (MB Docket No. 04-233). This is troubling to me as I listen to many stations in this bandwidth. For instance I listen to the local K-Love station at 91.5 FM (WJLR) and 90.5 (WIKL). These stations provide a positive alternative to the negative programming on most stations in the area. They are also commercial free so I don't have to worry about listening to commercials for products such as sexual enhancements or fad diet pills. I listen to 91.5 when I am at home and traveling to work and I listen to 90.5 when I am traveling near Indianapolis.

Please do not expand the LPFM service to give it priority over stations like this. I know that these frequencies are less expensive to operate and that is needed for a listener supported radio station such as K-Love.

I thank you for your time and consideration of my opinion on this proposal.

Sincerely,

Tim Miller
